

InHouse Connexions Introduces Its Commercial Valuation Portal

Ponte Vedra Beach, FL – June 15, 2015 – InHouse Connexions, a nationwide provider of appraisal management software, announced the debut of a new platform for commercial lenders and appraisers.

Connexions Commercial Valuation Portal (CCVP) will provide a fully transparent, centralized platform for all stakeholders in the commercial valuation chain and significantly reduces the time and administration required to fulfill successful transactions. CCVP will provide clear validation and valuation checks on property portfolios and helps identify qualified and experienced appraisers for commercial properties with a full audit trail of the valuation process and significantly reduces instances of fraud.

CCVP enables lenders to:

- Order full portfolio appraisals
- Request blind bids and multiple bids
- Order multiple products (e.g. Engineering and Environmental Reports) on a single portfolio
- Auto-assign vendors, account managers or reviewers by property type, transaction type, loan type or geographical competency
- Customize and audit the workflow process
- Automatically re-appraise for large mortgage properties

“As demand for commercial property continues to grow, our objective is to provide a highly efficient and transparent tool. This new product is a one stop shop for end-to-end commercial valuation risk and process management and complements our well-established residential valuation platform which is already extensively used by lenders across the US,” said Jennifer Creech, President InHouse, Inc.

[About InHouse Connexions](#)

Connexions is a cloud-based technology platform that gives lenders the freedom and bandwidth to work with a limitless number of AMCs, appraisal companies, their own trusted panel of appraisers, and any QC vendor in the marketplace, while maintaining a single system of record to manage all orders. Connexions partners with its AMC channel and allows lenders to design and manage the appraisal process from a menu of options depending on the appetite for risk and their unique business needs, from basic platform usage to outsourcing the entire process, or anything in between.
